

Python Number Guessing Game Project

Objective: Create a game where the computer selects a random number and the player guesses it.

Features:

- Random number generation
- User input
- Hint: Too high/Too low
- Count attempts
- Winning message

Python Code:

```
import random

secret = random.randint(1, 100)
attempts = 0

print("Welcome to the Number Guessing Game!")
print("Guess a number between 1 and 100.")

while True:
    guess = int(input("Enter your guess: "))
    attempts += 1

    if guess < secret:
        print("Too low! Try again.")
    elif guess > secret:
        print("Too high! Try again.")
    else:
        print(f"Congratulations! You guessed the number in {attempts} attempts.")
        break
```

Conclusion: This project demonstrates loops, conditionals, user input, variables, and the random module.
